Underground Fuel Tank Installer's Training Seminar

Tank Solutions Pty Ltd, Australia's leading manufacturer of Double Wall Underground Storage Tanks for the retail fuel and gen-set sectors, would like to invite you to attend an afternoon to improve your understanding of the compliance requirements and "best practice" around the installation of our tanks. We will address the deviations in our new Installation Manual compared to the existing document.

To enable as many interested parties as possible to attend we have scheduled three separate seminars - one each for Sydney, Brisbane and Melbourne. There will be an event scheduled for Perth in early 2019.

We strongly recommend that representatives of all Installers or Contractors of underground FRP tanks for retail fuel and gen-set sites attend one of the seminars. The seminars will also be of interest to MOC's, site owners, developers or builders who have a need for underground fuel tanks in the near future and other vested interested parties such as tank testers.

We note that at the time of the seminars our Accreditation test will be upgraded to cater for the alterations to be discussed – the need for re-sitting the tests in a reasonable timeframe will be addressed at the seminars.

All attendees will receive a copy of the latest installation instructions.

The seminar will include, but not be limited to-

1. Compliance and verification issues at sites – registration of documentation for warranty
2. New installation manual – new accreditation certification testing
3. Best practice procedures on the installation of U/G FRP tanks for retail fuel applications
4. Process in the event of an on-site NCR
5. Backfill issues
6. Aquator Oil-Water Separator
7. Feedback from attendees
